

MICHAEL WAGAYE

AI AUTOMATION DEVELOPER | AWS CLOUD ENGINEER | FULL-STACK DEVELOPER

+251-985-81-7122 • Addis Ababa, Ethiopia • [Github](#) • michaelofthesith@gmail.com

PROFESSIONAL SUMMARY

AI Automation Developer, AWS Cloud Engineer, and Full-Stack Developer with experience building software, automating operational workflows, integrating cloud platforms, and delivering technical training. Hands-on with Python, PowerShell, Microsoft 365, Power Automate, AWS, REST APIs, databases, monitoring platforms, and web development. Strong at translating operational problems into scalable technical solutions and bringing a consulting mindset across discovery, solution design, implementation, documentation, stakeholder communication, and knowledge transfer.

CORE EXPERTISE

AI & Automation: Python, Power Automate, AI-assisted workflows, Selenium, process automation

Cloud & Microsoft: AWS, Microsoft 365, SharePoint, Entra ID, Microsoft Graph API

Monitoring & Security: Zabbix, Wazuh, Graylog, Power BI, logging, alerting

Development: Python, JavaScript, TypeScript, Node.js, Java, React, PHP, REST APIs

Consulting: Requirements discovery, solution design, technical advisory, training, mentoring

CERTIFICATIONS

AWS Certified Solutions Architect – Professional – In progress

AWS Certified Solutions Architect – Associate

AWS Certified Cloud Practitioner

ALX Professional Foundations

Advanced English Proficiency – Duolingo English Test

EDUCATION

BSc in Computer Science

HiLCoE School of Computer Science and Technology

May 2021 – Oct 2025

High School Diploma

Ethio-Parents' School

2018 – 2021

PROFESSIONAL EXPERIENCE

MMCY | December 2025 – Present

AI Automation Developer & Cloud Engineer

- Design and deliver Python, PowerShell, Power Automate, API, and Microsoft 365 automations for IT operations, monitoring, reporting, backups, inventory, alerting, and reconciliation.
- Build AI-ready and AI-assisted automation pipelines that centralize operational data so incidents, risks, anomalies, and repetitive workflows can be summarized, prioritized, and acted on faster.
- Integrate Microsoft Graph API, SharePoint Online, Teams, Power BI, Zabbix, Wazuh, Graylog, HikCentral, Active Directory, Raspberry Pi services, and network devices.
- Support cloud and hybrid environments including virtual infrastructure, identity integrations, certificate-based authentication, secure app access, and scheduled workloads.
- Own automation from requirements and design through implementation, testing, documentation, monitoring, troubleshooting, and production support.
- Advise stakeholders on where automation, AI, cloud services, or scripting can improve reliability, response time, reporting quality, and process efficiency.

YeMuyaWeg | March 2024 – May 2025

Full-Stack Developer & Technical Trainer

- Designed and developed full-stack web applications across frontend, backend, databases, APIs, testing, deployment, and maintenance.
- Worked with users and stakeholders to clarify requirements, recommend technical approaches, and convert ideas into working software.
- Delivered practical software-development training to young professionals covering programming, web development, debugging, project work, and professional engineering practices.
- Mentored learners through real projects and provided technical guidance on solution design, tooling, and implementation choices.

SELECTED AUTOMATION & AI-ENABLED ENGINEERING PROJECTS

Unified Endpoint Asset & Software Inventory

PowerShell • Microsoft Graph • SharePoint • Power BI • Wazuh

Automated endpoint/software inventory, reconciliation, SharePoint reporting, license visibility, run logging, and historical security context. Creates structured data for AI-assisted anomaly detection, asset-risk scoring, and natural-language inventory insights.

Zabbix WAN, Website & Infrastructure Monitoring

Zabbix • Teams • Power Automate • APIs

Built WAN, latency, packet-loss, website availability, trigger, recovery, duration, and Teams-routing automation. Normalized alert data supports AI-assisted incident summarization, correlation, and noise reduction.

Prometheus/Grafana to Zabbix Migration

Zabbix • Grafana • Prometheus • Teams

Migrated monitoring logic and alerting to Zabbix as the source of truth, validated coverage, cleaned Teams routing, and supported retirement of the legacy stack. Centralization improves data quality for AI-driven operations analysis.

HikCentral Biometric & IoT Monitoring

HikCentral API • Python/PowerShell • Teams

Automated device availability, online/offline alerting, firmware visibility, and IoT monitoring. Device-state history can support AI-assisted trend analysis and proactive fault identification.

HikCentral Configuration Backup to SharePoint

Entra ID • Certificates • Graph API • SharePoint

Implemented unattended configuration backups using certificate-based Entra authentication and least-privilege SharePoint access. Backup history supports AI-assisted change comparison and configuration-risk analysis.

Solar Assistant / Inverter Monitoring

Raspberry Pi • Solar Assistant • Power Automate • Teams

Integrated inverter telemetry with automated alerts so power issues are surfaced quickly. The telemetry creates a basis for AI-assisted pattern recognition and abnormal-behavior detection.

Active Directory User Creation Audit

Active Directory • Windows Events • PowerShell

Automated visibility into account-creation events, including Event ID 4720 and creator-versus-created-user mapping. Audit data can support AI-assisted identity-risk classification and unusual-activity detection.

AD Computer Placement & Automation

Active Directory • PowerShell • GPO

Automated computer-placement and domain-management workflows to reduce manual directory administration and improve consistency. AI can later identify misplaced devices, policy exceptions, and access anomalies.

HR / M365 / AD / Biometric Reconciliation

PowerShell • Microsoft 365 • Active Directory

Structured cross-system access reconciliation to identify HR/system mismatches and stale access. The workflow is suitable for AI-assisted mismatch classification and risk-based review.

Weekly Change Request Summary Automation

SharePoint • Power Automate • Email • Archive

Built a reliable SharePoint-driven flow that validates change-summary files, sends structured summaries, archives processed files, and reduces duplicates. Designed for AI-generated change summaries and management-ready reporting.

Wazuh Vulnerability Monitoring Automation

Wazuh • API • Scheduled Scans • Reporting

Enabled recurring vulnerability scanning and historical endpoint visibility, including offline agents. Data can be enriched with AI to prioritize remediation by severity, recurrence, exposure, and business impact.

Graylog Logging & Monitoring KPI Automation

Graylog • API • Python/Reporting

Automated monthly log-volume, compliance, device coverage, peak-day, and noisiest-device reporting. Structured log metrics can feed AI-assisted anomaly detection and executive summaries.

Network Configuration Backup Automation

PowerShell • Posh-SSH • SSH/SCP

Automated recurring network configuration backups and repeatable retention workflows. Stored configurations can support AI-assisted drift detection, change comparison, and configuration review.

Firmware & License Expiry Monitoring

PowerShell • APIs • Teams Alerts

Automated firmware and license-expiry tracking to reduce manual checks and prevent avoidable service risks. AI enrichment can prioritize upcoming risks and generate recommended actions.

Raspberry Pi ISP Speed-Test Monitoring

Raspberry Pi • Python • Excel/Reporting

Automated scheduled ISP speed tests across sites and captured performance history for WAN/SLA validation. Historical data supports AI-assisted trend detection, degradation analysis, and predictive capacity insights.

Automated SSL/TLS Certificate Monitoring

Python/PowerShell • External Assets • Alerting

Designed certificate-expiry and internet-facing service monitoring to reduce outage risk. AI can enrich ownership mapping, risk scoring, and remediation recommendations.

Centralized Internet-Facing Asset Inventory

APIs • SharePoint/Data Store • Automation

Designed a centralized inventory of domains and external assets to improve visibility, ownership, and monitoring coverage. Supports AI-assisted exposure analysis, asset classification, and prioritization.

Server Patch Compliance Monitoring

PowerShell • Windows/Linux • Reporting

Designed automated patch-compliance checks and reporting to identify missing updates and remediation gaps. AI enrichment can prioritize systems by exposure, criticality, vulnerability context, and patch age.

Automated IT Incident Timeline & Reporting

Monitoring APIs • Power Automate/Python • Reporting

Designed a workflow that consolidates alert, recovery, duration, and supporting event data into incident timelines. Directly suited to AI-assisted incident narratives, root-cause hypotheses, post-incident summaries, and management reporting.

EARLIER DEVELOPMENT PROJECTS

- LAWATA (React/Vite/GSAP)
- Fewes Meal Delivery (React/Node.js/REST)
- Synth E-Commerce (PHP/MySQL/JavaScript)
- OpenAI Translator (Python/OpenAI API)
- Internal Web App Automation Suite (Python/Selenium)
- Report Generator Bot (Python/Excel)
